

# 08 Section 08 Maven Life Cycle:

## 1. **Validate:**

It checks if the project is correct and if all the necessary dependencies are there.

## 2. **Compile**

this compiles the source code of the project.

## 3. **Test:**

Test the compiles source code using the suitable test framework.

## 4. **Package**

Takes the compile code and package them into JAR.

git ignore is the folder where we write the files which we dont want to commit.
